MASTER THESIS

Evaluation of optical aberrations using Phase Diversity

Author:
Jordan VOIRIN

Supervisors:
Dr. Laurent JOLISSAINT
Dr. Jean-Paul KNEIB

*A thesis submitted in fulfillment of the requirements
for the degree of Master in Applied Physics*

in the

Astrophysics laboratory
Basic Sciences

October 27, 2017

Declaration of Authorship

I, Jordan VOIRIN, declare that this thesis titled, "Evaluation of optical aberrations using Phase Diversity" and the work presented in it are my own. I confirm that:

- This work was done wholly or mainly while in candidature for a research degree at this University.
- Where any part of this thesis has previously been submitted for a degree or any other qualification at this University or any other institution, this has been clearly stated.
- Where I have consulted the published work of others, this is always clearly attributed.
- Where I have quoted from the work of others, the source is always given. With the exception of such quotations, this thesis is entirely my own work.
- I have acknowledged all main sources of help.
- Where the thesis is based on work done by myself jointly with others, I have made clear exactly what was done by others and what I have contributed myself.

Chapter 2

Phase Diversity Experiment

2.1 Theoretical Background

2.2 Experimental Setup

The design of the experiment was already done by Bouxin (2017). I built the setup according to her plans and specification.

The experiment is mounted on a pressurized legs optical table. The setup contains six components : a light source, an entrance pupil, an imaging system, a converging lens to focus the beam on the camera, a camera and a wavefront sensor.

2.3 Results

This section present the results of the phase diversity experiment, with the introduction of different sources of aberration.

2.3.1 Astigmatism

The first aberration studied in this work is the astigmatism aberration introduced by a tilted parallel plane plate (link to section). A parallel plane plate introduces astigmatism in addition to the defocus introduced by the perpendicular plate.

Appendix A

Frequently Asked Questions

A.1 How do I change the colors of links?

The color of links can be changed to your liking using:

```
\hypersetup{urlcolor=red}, or  
\hypersetup{citecolor=green}, or  
\hypersetup{allcolor=blue}.
```

If you want to completely hide the links, you can use:

```
\hypersetup{allcolors=.}, or even better:  
\hypersetup{hidelinks}.
```

If you want to have obvious links in the PDF but not the printed text, use:

```
\hypersetup{colorlinks=false}.
```
